

Saudi Boilers two Drum Industrial Boilers combine the advantages of two drum natural circulation with high efficiency and provision of various steam quality options. These boilers are equipped with membrane-type water-wall cooled furnaces enhancing heat absorption and durability. The stage steam separation system ensures excellent steam dryness complying with several process-critical applications. The boilers can handle various types of fuels resulting in low-maintenance boiler meeting stringent efficiency and emission standards.

Note: Boiler dimensions are subject to operating parameter variations.
